

## DigitDia evolution

With the innovative DigitDia evolution you can now view and digitize your entire archive of slides directly from the magazines.

The device is computer-independent and very easy to use. As with a traditional slide projector, the slides are played back immediately after being inserted into the device. This happens on a brilliant IPS display, which is integrated in the device. Optionally, you can also connect an external monitor, TV set or projector via the HDMI output of the DigitDia evolution.

Thus, slide show evenings are possible again as before. Both the playback and the digitization of your slides can be done manually or automatically.

The automatic scanning of a complete magazine with 50 slides is done in just four minutes in best resolution, with the digital images being saved directly onto an SD card.

### Product Information

- **Main Function:**  
automatic stand-alone viewer and scanner for slides
- **Slide Types:**  
5x5 cm mounts with a thickness of up to 3.2 mm
- **Image Sensor:**  
1/2.33" – 15.3 Megapixels CMOS sensor
- **Resolution:**  
4608 x 3072 pixels or 5760 x 3840 pixels (interp.)
- **Scanning Speed:**  
less than 5 sec. per slide (automatic mode)
- **Display:**  
7 inch (17.8 cm) wide viewing angle IPS LCD
- **Color Correction:**  
red, green, blue (RGB -2.0 EV to +2.0 EV)
- **Exposure Correction:**  
automatic / manual (-2.0 EV to +2.0 EV)
- **Light Source:**  
diffuse daylight LED light source for optimal color rendering and reduction of dust and scratches
- **Digital Output Format:**  
JPEG (low compression)
- **Usable Magazines:**  
Universal (DIN 108), CS, LKM
- **Supported Storage:**  
SD/SDHC card with up to 128 GB
- **Power Supply:**  
Adapter 12 V / 1.5A
- **Interface:**  
HDMI A type
- **Weight:**  
approx. 1650 g
- **Dimensions:**  
245 x 243 x 141 mm (L x W x H)

### Scope of Delivery

- DigitDia evolution
- power adapter
- cleaning brush
- user's manual
